## Rétrinal Eyes

A patented combination of **Retinaldehyde** and **Hyaluronic Acid** fragments to **reduce puffiness and fine lines**, along with **Dextran Sulfate**, a vasoconstrictor and anti-inflammatory agent to help de-congest and **reduce appearance of dark circles** through vein constriction.

The skin in the eye contour area is 4x finer than that on the face. It is more delicate and reactive. Rétrinal EYES offers a targeted solution to address the specific problems of the delicate eye area.

### Indications:

- Deep wrinkles
- Dark circles
- Puffiness
